

YOUR SEAT STAYS TIGHT WITH

# STATITE®

THE PROFESSIONAL HINGE FIXING SYSTEM

Installing a toilet seat can seem simple. But no matter how carefully installed somehow they always come loose. Research shows that the number one consumer need in a toilet seat is a product that stays tight. That's why we developed STA-TITE®.

Toilet seats work loose for two reasons: Firstly, the mounting hole of the toilet pan is much larger than the bolt that goes through it, creating natural movement on the pan no matter how tight the seat is installed; Secondly, the toilet seat is not fully tightened enabling it to more easily loosen. The hinge system of the STA-TITE® toilet seat solves both of these problems.

YOUR SEAT STAYS TIGHT WITH

# STATITE®

THE PROFESSIONAL HINGE FIXING SYSTEM

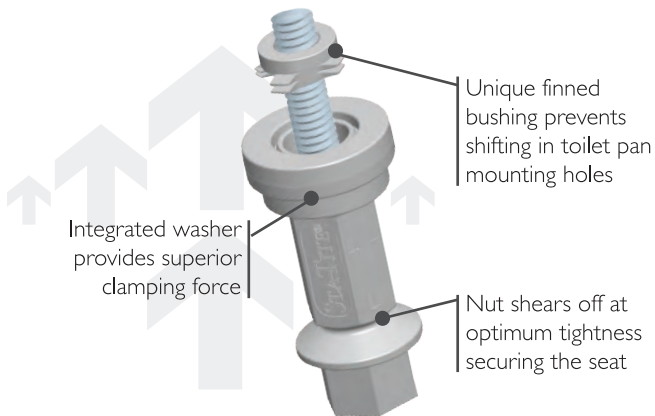

- Prevents hinge movement
- Provides superior clamping force
- Resists corrosion
- One-piece nut installs easy
- Snaps tight at the optimum tightness

## STA-TITE® Bottom Fix

The STA-TITE® Bottom Fix solution is designed for your classically installed toilet seat with hinge fixing from the bottom of the pan. STA-TITE® Bottom Fix consists of a unique finned bushing that flexes to provide a snug fit in any toilet pan mounting hole preventing hinge movement. Plus, a nut that provides superior clamping force and resists corrosion.

The one-piece nut makes installation easy eliminating fumbling with individual nuts, rings and washers during seat installation. The nut snaps off at the bottom when reaching the optimum tightness, locking the seat down at the perfect tightening torque. No more loose seats with STA-TITE®!

Because of the robust nature of the STA-TITE® bolt, every aspect of the toilet seat has been analysed and tested to stand up to the force that STA-TITE® produces. The result is that Carrara & Matta STA-TITE® toilet seats do exactly what they say: stay tight.

## STA-TITE® Top Fix

Changing your loose seat can be a hassle when there is no easy access to the bottom of the pan. To tackle this problem we created STA-TITE® Top Fix: an innovative hinge fixing system that keeps your toilet seat tight and installs easily from the top of the pan. The unique finned bushing flexes to provide a snug fit in any toilet pan mounting hole. The nut snaps off at the optimum tightening torque preventing the seat from moving. When fitted correctly, the seat will not slip, shift or wobble on the pan. STA-TITE® seats have gone through vigorous testing, and hold strong and stay tight longer than any other seat.
